

SafeEyes® Internet Filtering Software

SafeEyes is an Internet filtering product that is managed on the company's servers in Georgia. For users to access the Internet, a login is required to activate the SafeEyes settings specified by Shoreline Schools. Logins in Shoreline will follow a consistent format: Username uses the prefix sl- plus the 7-digit barcode on the student laptop. For instance, if the laptop's barcode reads "0034567" then the username for SafeEyes will be "sl-0034567". The Password is the same for all users: "safeeyes". It is highly recommended that you check the box allowing the login to occur automatically. **Note: without activating SafeEyes with a valid login, all access to the Internet will be blocked.**

While the filtering settings are controlled at the server level by district officials, parents can still monitor their child's activities through the Usage Reports. With SafeEyes activated via the student's login (the ✓ icon in the dock must be green – not red or yellow), hold the Option key and click-hold on the SafeEyes icon on the dock. Select the item "Usage Reports" from the menu that pops up. You will then see a screen that shows which sites have been visited and which programs have been used.
